

RTM and SP1 2D Panel

Whilst we appreciate most people do not make use of a 2D panel within FSX these days, we understand that a great deal of people prefer 2D over VC for FSX flying.

The default panel which ships with the T-6/A Texan II does NOT feature a 2D panel. For your convenience, we have included the 2D panel from RTM and SP1 in this package for those wishing to install it in the current version.

To install the 2D panel to the Advanced Edition of the T-6/A Texan II, please run the 2D Panel Installer file and choose 'Install 2D panel' option.

To uninstall the 2D panel from the Advanced Edition of the T-6/A Texan II, please run the installer file and choose 'uninstall 2D panel' option.

Regards

David Brice.
